The 2021 South-Central Water Conference will be held Thursday, February 2nd at the Phelps County Ag Center and virtually through Zoom. Join us for coffee and doughnuts at 9:30 a.m. Sessions will begin at 10:00 a.m. The conference is free of charge and a lunch will be provided for those attending. The program should conclude by 3 p.m. A full agenda for the event will be posted at www.tribasinnrd.org as soon as it is available as well as how to access the Zoom link.

The conference is sponsored by Tri-Basin Natural Resources District, Lower Republican Natural Resources District, Central Nebraska Public Power and Irrigation District, UNL Extension, and Holdrege Area Chamber of Commerce. It is a joint effort to increase the public’s understanding of water-related issues in Nebraska. Topics this year will include UNL NRD Groundwater Well Sample Results & Crop Recommendations based on Water Chemistry, Field Imagery for Monitoring Crop Health, 2021 Weather Outlook - Drought Management for Irrigators, and Water Resources Updates from local agencies.

Area agri-businesses will display their products and services at the water conference and will have representatives on hand to visit with conference participants.

Producers in Tri-Basin NRD’s Phase II or Phase III Groundwater Quality Management Areas can qualify to receive nitrogen management recertification credit by signing in when they attend the conference.

Keynote Speaker:
Martha Shulski, Nebraska State Climatologist

Other speakers at this year’s conference include:
Dr Charles Wortmann, UNL Dept of Agronomy & Horticulture
Tom Riley, Director of Nebraska DNR
Andrea Basche, UNL Dept of Agronomy & Horticulture
Nolan Little, TBNRD
Scott Dicke, LRNRD
Tyler Thulin, CNPPID
Craig Scott, US Bureau of Reclamation

The Tri-Basin NRD Conservation Tree Program is underway!
(See enclosed information.)

Contact Tri-Basin NRD or your local NRCS office for information about planting a windbreak or shelterbelt.
Tri-Basin NRD Water Conservation Incentive Program Update

The Tri-Basin NRD Water Conservation Incentive Program (WCIP) is intended to address three groundwater management issues: ensuring sustainability of groundwater supplies, protecting streamflows from diminishment due to groundwater pumping and improving groundwater quality in Gosper, Phelps and Kearney counties. The goal of this voluntary program is to reduce groundwater pumping and increase irrigation water use efficiency in Tri-Basin NRD. Tri-Basin Natural Resources District (TBNRD) launched the Water Conservation Incentive Program (WCIP) for groundwater irrigators in 2019.

In 2020 the TBNRD expanded the program to encourage irrigators with both surface water turnouts and groundwater wells (commingled parcels) to use canal water rather than pump groundwater. This will both reduce the amount of groundwater that is pumped and increase groundwater recharge in the area. TBNRD offers five-year contracts to Central Nebraska Public Power and Irrigation District (CNPPID) customers.

Last year we had a sign-up period for the program that ran from October until March. This year, the NRD board of Directors authorized us to accept applications until the program enrollment limit of 8000 acres is reached. Applications will be ranked on a point system. The ranking process awards points for a variety of specific factors, including location. The need for groundwater recharge is greatest east of US Highway 183, so additional points are awarded to applications for commingled parcels located in eastern Phelps and Kearney counties.

Because NRD funds are limited, a maximum of 8000 acres in contracts can be approved. Individual landowners will be limited to enrolling a total of no more than 320 acres in the WCIP. So far, we have enrolled about 1600 acres in the groundwater option and 3500 acres in the commingled option. Once the enrollment limit is reached, water savings to the district could amount to as much as 7500 acre-feet per year.

Groundwater users who believe that they are efficient irrigators should consider the benefits that WCIP will provide them. In exchange for their participation, landowners will be paid up to $5 per acre for the equivalent of one acre-inch of water credit per acre per year, with the opportunity to sell additional credits to the NRD at a set price. In addition to NRD purchases, landowners will have the opportunity to sell water credits on the open market at any agreed-upon price (private transactions require NRD board approval). Participants also get flexibility to irrigate any acres within enrolled parcels.

Owners of commingled parcels can enroll in WCIP, if they are willing to limit their groundwater use. If a landowner uses less than one inch of groundwater per acre per year, Tri-Basin will pay them $35 per acre, fully reimbursing them for the cost of water service provided by CNPPID. If a landowner decides that they need to use more than one acre-inch per acre of groundwater in any year during their contract period, they are free to do so, but the NRD will reduce their reimbursement by $5 per acre-inch they pump beyond that first inch.

Landowners and irrigators can find out more specific information about Tri-Basin NRD’s Water Conservation Incentive Program by visiting our website: www.tribasinnrd.org.

New Director Appointed for Subdistrict 1

G. Reed Philips has been appointed to represent subdistrict one on the Tri-Basin Natural Resources District’s board of directors. Philips will serve the remaining two years of the four-year term of Phyllis Johnson also of rural Bertrand. Johnson resigned from the board after serving over 25 years.

Philips is the fourth generation of his family living and working on the family farm southeast of Bertrand where he raises row crops and cattle. He and his wife Sheila have four children.

Philips is a graduate of Bertrand Community School and received a Bachelor of Science degree in agriculture from the University of Nebraska-Lincoln. He is a member of the Nebraska Corn Growers Association, Nebraska Cattlemen’s Beef Association, CHS board member in Holdrege, Nebraska LEAD Program (Class 25), Westmark Evangelical Free Church and served eight years on the Bertrand School Board. In his free time, he enjoys golfing, hunting, road trips, old cars, woodworking and following his kids in their sports and activities.

Philips stated that “Serving on the NRD board will give me insights into the intricacies of our natural resources, how to maintain and keep them safe for generations to come, and to be good stewards of them.”

Chemigation Renewals

Tri-Basin NRD will be sending out renewal forms to producers who had chemigation permits last year. Those producers whose chemigation certification has expired will need to attend one of the chemigation training sessions held in February and March or complete the online course. For more information about dates and locations for classes call the county Extension Office where you would like to take the class. **Preregistration is required.** Gosper: 308-785-2390, Phelps: 308-995-4222, Kearney: 308-832-0645

Chemigation renewal permits are due in the Tri-Basin NRD office before **June 1, 2021.**
TBNRD Trees Honor District Newborns

Tri-Basin NRD offers parents of newborns in the district the gift of a seedling tree. These trees are available to the family of any child born in Gosper, Phelps or Kearney Counties since the previous tree season (April 2020). You can reserve a baby tree by calling our office at (308) 995-6688 or 1-877-995-6688 or by emailing the baby’s name, birthdate, parents’ names, address and phone number to nmunter@tribasinnrd.org. We will send you a postcard in April letting you know when and where to pick up your tree. If you have any questions, please call our office and ask for Nate.

Grant Township Water Use

Producers with irrigated crop ground in Grant Township (5N-13W) in eastern Kearney County should have flowmeters installed on all irrigation wells by December 31, 2021. Cost share may be available, so check with your local NRCS office to apply.

Nitrogen Reports Due

Nitrogen Management Reports for the 2020 crop year were due December 31, 2020. If you have fields in the Phase II or Phase III areas of the Groundwater Quality Management Area and have not turned in your reports, please do so as soon as possible. If you need forms or help filling them out, contact the TBNRD office.

Nitrogen Management Certification Reminders

The Groundwater Quality Management Areas established by Tri-Basin NRD have allowed district staff to work cooperatively with farmers and agronomists for more than 25 years to help improve the timeliness, efficiency, and effectiveness of fertilizer application. These efforts have resulted in stable or declining nitrate-nitrogen levels in groundwater supplies in much of the district, safeguarding the quality of our groundwater.

Producers in Phase II and Phase III areas of the Groundwater Quality Management Area need to take soil samples this winter and water samples in Summer 2021. Current Nitrogen Management certification is required. Producers whose certification has expired will receive notification in January by mail. Training dates have been set but you must contact the county extension office and preregister for in person classes. Gosper: 308-785-2390, Phelps: 308-995-4222, Kearney: 308-832-0645 Attendance at the South-Central Water Conference on February 2nd also qualifies for Nitrogen Management Certification. (You must sign-in to receive credit.)

Total # of Trees

Multiply total # of trees x .85

Mulch x .35/foot

Staples x .15

Subtotal

Tax (Holdrege 7%, Minden 7.5%, Elwood 6.5%)

TOTAL AMOUNT DUE/PAID

Tree Order Deadline is April 1, 2021.

TREES PROTECT LIVESTOCK
• Increase calf survival by 12%
• Minimize winter stress
• Increase feed efficiency

TREES IMPROVE PROPERTY
• Reduce heating/cooling costs
• Increase property value
• Reduce noise and dust

TREES IMPROVE COMMUNITY
• Lower stress & increase wellbeing
• Improve air & water quality
• Stimulate economic development

TREES PROTECT WILDLIFE
• Provide habitat and food
• Shelter from bad weather
• Cover from predators

TREES IMPROVE WATER QUALITY
• Reduce soil erosion
• Stabilize stream banks
• Filter pollutants

TREES PROTECT CROPS
• Can increase yields
• Conserve plant moisture
• Reduce wind damage

Tree Pickup will be at: _____ Tri-Basin NRD _____ Minden NRCS _____ Elwood NRCS
WHY PLANT A WINDBREAK?

Windbreaks and shelterbelts provide many benefits. Windbreaks planted along field boundaries reduce soil erosion by reducing wind velocity. Shelterbelts planted around farmsteads reduce heating costs in homes and shop buildings. Shelterbelts can protect livestock from blizzards and serve as “living snow fences.” Trees and shrubs also provide food, shelter and nesting habitat for many species of birds and mammals.

NRD TREE & SHRUB PLANTINGS

Contact the NRD Office or your county NRCS for help with determining the type and number of trees and shrubs you need. The technician will make arrangements for the tree order and planting service. The NRD will plant the trees according to the plan. Trees are planted in the spring as soon as conditions are suitable. The NRD tree planting crew will notify landowners of the approximate date and time of planting.

SITE PREPARATION

Good site preparation is a key to rapid tree growth and survival. The best site preparation begins the year before the trees are planted. On heavier soils, working the ground to kill competing vegetation is an excellent method of preparing the site. The technician assisting in planning a windbreak or habitat plot can advise you about the type of site preparation needed. The technician can also help you determine if herbicide carryover will be a problem.

WEED CONTROL

Weed control in the form of plastic mulch is available through the district. This woven material is installed over the trees after planting. Slots are then cut for the trees. Plastic mulch not only eliminates weeds but also helps to preserve soil moisture.

PLANTING YOUR OWN TREES

You can order trees and shrubs at the NRD or your local NRCS Office. Orders must be in multiples of 25 per species. We will send you a postcard when your trees arrive. We also have tree spades available to rent.

DRIP TAPE

Tri-Basin has subsurface “drip tape” available for watering trees planted by the District. The water source could be a portable tank or a hydrant. Check with the TBNRD Land Resource Coordinator for more information.

COST-SHARE

Tri-Basin NRD offers cost-share funds for tree plantings and plastic mulch installation. You should apply at your county NRCS office before March 1. All sites must be properly prepared before planting to qualify for cost-share. Reimbursement is made only after full payment is received. The minimum total cost of plantings eligible for cost-share is $500. Cost-share may also be available from your county USDA office. Pheasants Forever and Nebraska Game & Parks Commission also offer programs for wildlife habitat improvement. NRCS staff can help you determine which programs have funds available and best suit your needs.

BILLING ON NRD PLANTINGS

Tri-Basin NRD bills for trees/tree planting service after completion. Full payment is due upon receipt of the billing. Cost-share payments will not be made until payment is received at the Tri-Basin or NRCS office.
